

THERAPEUTIC GLOVE APPARATUS

1 ABSTRACT OF THE DISCLOSURE

2

3 A therapeutic glove apparatus has a first glove
4 half formed of a flexible material and shaped to cover
5 one side of a person's hand and has a bladder broken
6 into cells and filled with a viscous liquid, such as
7 a fluid clay material. A second glove half is formed
8 of a flexible material and shaped to cover the other
9 side of a person's hand and is movably attached to the
10 first glove half and also has a bladder having a
11 plurality of cells formed therein filled with a
12 viscous material, such as a fluid clay. Attaching
13 straps have hook and loop material thereon for
14 attaching the first and second glove halves for
15 removably attaching a therapeutic glove over a
16 person's hand. The therapeutic glove allows a person
17 to exercise the muscles of the hands, fingers, and
18 wrists by movement against the resistance of clay
19 while applying heat or cold to a person's hand.
